

WHIP CHECK /SAFETY CABLES

Whip check Safety Cables are strong steel cables with spring loaded loops which are used on air, steam hoses for the safe holding of assemblies and to reduce the danger caused by hose couplings failure. When a hose is disconnected under pressure the hose will whip violently causing potential injury to those nearby. Whip check Safety cables prevent injury to operators and damage to plant and machinery.

The design of the safety cable allows quick installation and removal. No tools are required. Simply pull back the spring-loaded loop, slip it over the hose and position the loops over each hose before connection to provide security against hose whip.

Available in two sizes

- For hose up to 1" ID
- For hose 1 ¼" ID to 3" ID
